Trends and Usage of Employment Insurance (E.I.) in Newfoundland and Labrador gives an overview of past and current trends in Program usage in the Province. Since Confederation, when the Unemployment Insurance (U.I.) Program was introduced, U.I./E.I. programs have played a role in the Province's labour markets. Historically many workers enter and exit the program as seasonal work begins and ends each year. As a result, U.I./E.I. data provide useful information regarding the situation and events in the labour market and economy.

Since 1990, the Province's economy has experienced a recession, a collapse of the ground fishery, high levels of, as well as declining, out-migration and an economic recovery with some of the highest levels of performance recorded in Canada. All these have impacted U.I./E.I. usage and are reflected in statistical trends found in the data. The purpose of this brief document is to provide information on major trends since the early 1990s to 2002 (most recent reliable data). The information provides insight into labour market and economic performance and aspects of the dynamics of our economy.

Newfoundland and Labrador Statistics Agency: Special Tabulation

The Rise and Fall of E.I.

Employment Insurance (E.I.) usage peaked in the early 1990s at an annual average of approximately 80,000 beneficiaries. The number of claimants rose steadily throughout the 1980s (then called Unemployment Insurance or U.I.). Since the mid-1990s usage had declined to 1980 levels.

The strong growth in the number of claimants during the 1980s mirrored growth in employment. As more individuals, especially women, entered the labour force in primarily seasonal occupations, the number of individuals who were able to access U.I. increased.

A downturn in the Economy in the early 1990s, the groundfish crisis, out-migration and tightening of E.I. regulations throughout the 1990s have caused the number of claimants to decline dramatically. The increase in full time employment in recent years has also contributed to a leveling off in E.I. usage.

E.I. Usage is Seasonal

The seasonal pattern of E.I. usage is consistent with labour market activity. Most claims are initiated in the fall of the year as many seasonal jobs begin to wind down. In 1992, 48% of total claims initiated in this Province were started between September and December. The comparable figure for 2002 is 57%.

Employment Insurance

trends and usage in Newfoundland and Labrador

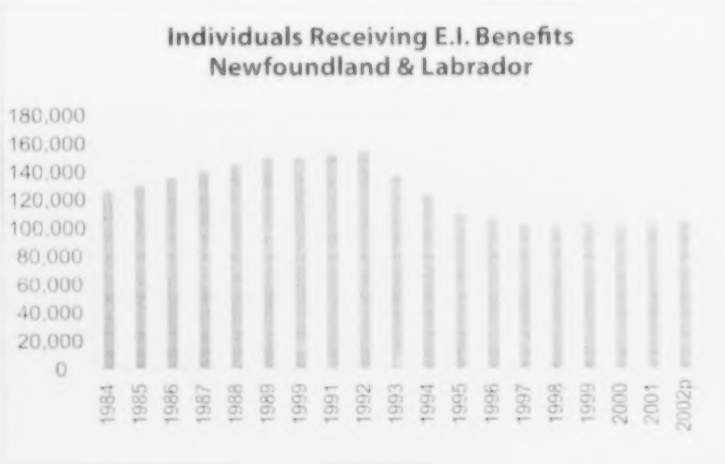
100,000+ Individuals Use E.I. Annually

The number of different people who access the program for some period of time during the year is about 100,000, significantly higher than the monthly average. This figure had peaked at 136,000 in 1992, but since major reform of the program in 1996, it has hovered in the 100,000 range.

E.I. beneficiaries

Chart 3

Annual T4U & T4E counts
Statistics Canada, Labour Division
& Small Area Administrative Data Division



Many E.I. Beneficiaries are Frequent Users

Approximately two-thirds (64%) of all E.I. beneficiaries between 1997 and 2001 had more than one claim. Nearly half (47%) had three or more claims in the 5-year period; 22% claimed benefits on five or more occasions. This distribution was little changed from the 1992-96 pre-reform period. While there is no standard definition of what constitutes a frequent user, it is generally accepted that individuals with three or more claims in a 5-year period are considered frequent users.

Table 1

Newfoundland and Labrador Statistics Agency: Special Tabulation

Table 1 shows a profile of the types of E.I. clients who are frequent users in this province for the period 1997-2002. For example, the chart shows that if you are a male E.I. client, there is a 53% likelihood that you are a frequent user; for females, the likelihood is 37%.

Employment Insurance

trends and usage in Newfoundland and Labrador

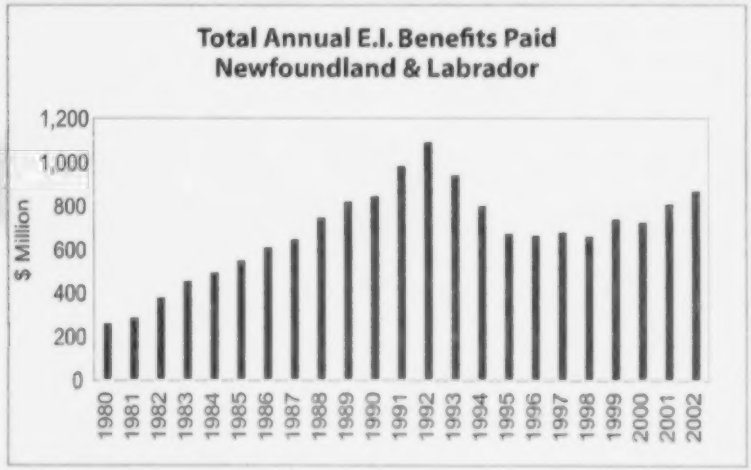
Total E.I. Income is Down From Early 1990s

The amount of funds entering the economy through E.I. benefits is significant. In 2002, $873 million in E.I. related benefits was paid to individuals in the Province. $557 million was paid to regular beneficiaries, $144 million was paid through fishing type claims and $172 million in other E.I. benefits.[1] This figure is down from 1992 when nearly $1.1 billion in total benefits was paid.

annual benefits

Chart 5

Statistics Canada, 73-001 & CANSIM Matrix # 005705



Proportionally, Female E.I. Usage has Declined More Than Males

While the increase in E.I. usage in the 1980s was primarily due to more females accessing the program, the decline since 1992 shows a higher percentage decline for females. Between 1992 and 2002, the number of males receiving regular benefits has dropped by 27,100 (34%); females have declined by 26,900 (44%).

by age

Chart 7

Newfoundland and Labrador Statistics Agency: Special Tabulation

Large Decline in the Number of Younger Claimants

Out-migration, on aging of the population, increased employment opportunities and tightening E.I. entrance requirements during the 1990s have contributed significantly to the reduction in the number of younger people who access the program. In 1992, 52% of regular beneficiaries were less than age 35; only 36% of beneficiaries were under 35 in 2002.

The younger the age, the larger has been the decline; the number of individuals less than 25 has declined by 61%, 25-29 by 58%, 30-34 by 52%. In 1992, half of all regular beneficiaries were age 34 or less; in 2002, the median age has increased by six years to age 40.

by occupation *

Table 2

Newfoundland and Labrador Statistics Agency: Special Tabulation

* *Excludes those employed as fish harvestors*

Large Decline in E.I. Claimants in Almost All Sectors

With the exception of Other Primary, there has been a decline in regular beneficiaries in all occupation types since 1992. The largest proportional decline was for clerical workers which have dropped 59% since 1992. Benefits for construction workers have declined by 50%. The only other occupation that is at near 1992 levels of E.I. usage is fish harvesters (shown in a later table).

Employment Insurance

trends and usage in Newfoundland and Labrador

Declining E.I. Usage is Not Regionally Biased

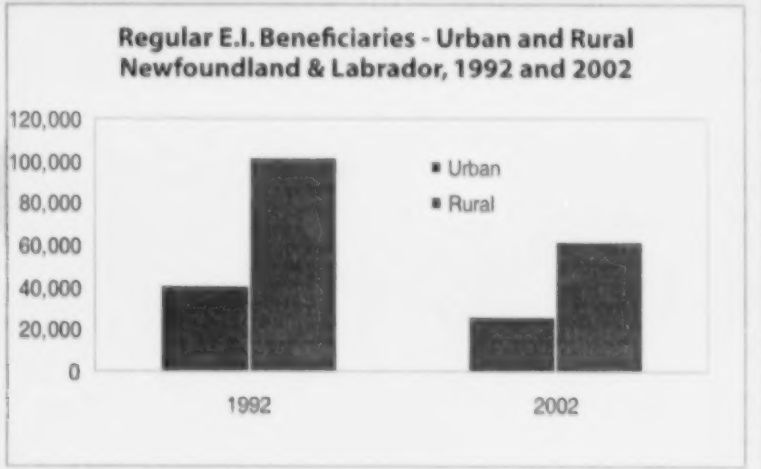
The proportional decline in E.I. usage over the period is virtually the same for rural and urban regions,[2] with declines of 36% and 39% respectively. Within both urban and rural areas, however, are regions or "pockets" which vary considerably from the average.

The decline in beneficiaries may be for different reasons depending on location. In the past, evidence indicates that a decline in rural areas implies reduced employment opportunities while a decline in urban regions indicates that there are more jobs or longer duration employment available. Population decline is also a likely significant factor in E.I. usage.

urban & rural

Chart 8

Newfoundland and Labrador Statistics Agency: Special Tabulation



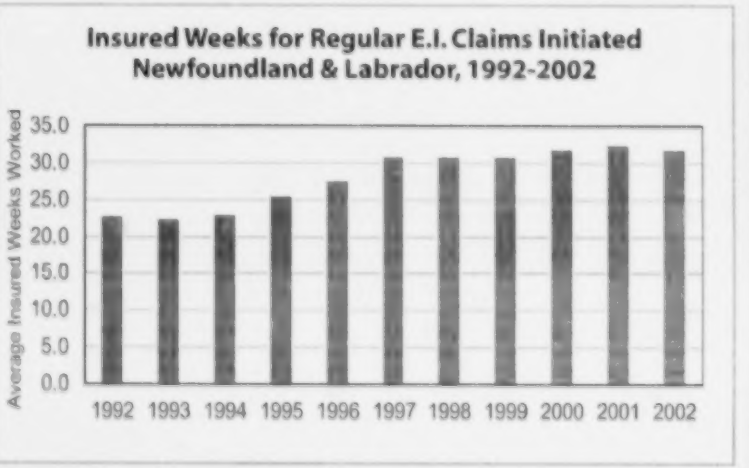
Duration of Employment is Up Significantly Since Early 1990's

Individuals are now working longer before applying for E.I. In 1992, the average number of weeks worked prior to applying for E.I. was 22.8 weeks. By 2002, this figure had increased by 9.1 weeks (or 40%) to 31.9.[3] Changing E.I. regulations which effect eligible benefit duration and benefit amounts, along with increased employment opportunities in recent years, have played significant roles in this trend.

insured weeks

Chart 9

Newfoundland and Labrador Statistics Agency: Special Tabulation

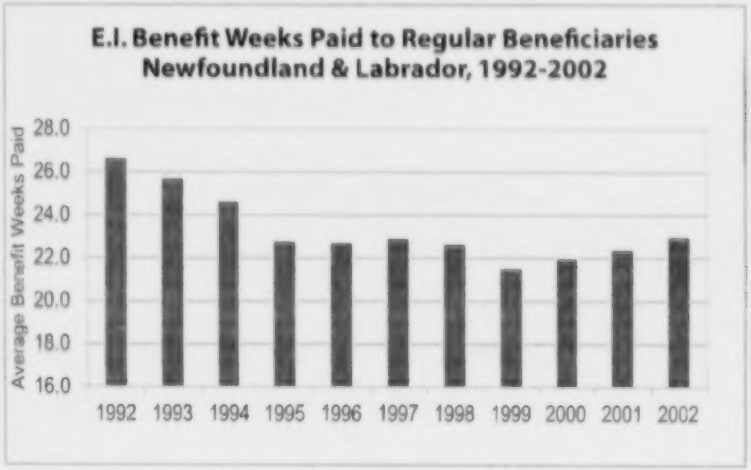


[2] Urban and rural regions are based on Canada Post definition as of 2002 postal code directory. See Appendix 1.

[3] In 1997 eligibility requirements for E.I. changed from hours to weeks. Above calculations assume 35 hours = 1 week for 1997 onward.

Employment Insurance

trends and usage in Newfoundland and Labrador



duration

Chart 10

Newfoundland and Labrador Statistics Agency: Special Tabulation

Duration of Claims is Down Since Early 1990's

The length of time people collect benefits has declined over the past decade. In 1992, the average number of annual benefit weeks paid to regular E.I. beneficiaries was 26.6 weeks. By 2002, this figure had declined by 3.6 weeks (or 14%) to 23.0. Changes to regulations in 1994 and again in 1996 which shortened the eligible duration of benefit periods is a contributing factor. Increased employment opportunities in recent years has also likely played a role.

Average Benefits - Regular E.I. Beneficiaries Newfoundland & Labrador, 1992 and 2002

	1992	2002	Change	Change
Average Qualified Weekly Benefit	$245	$278	$33	13%
Median Qualified Weekly Benefit	$233	$279	$46	20%
Monthly Average Total Benefits Paid	**$6,550**	**$6,380**	**-$170**	**-3%**

average paid

Table 3

Newfoundland and Labrador Statistics Agency: Special Tabulation

Monthly Average Benefits Have Not Changed Significantly

While the average weekly benefit for which workers have qualified has increased, total benefits paid to individuals annually have changed little. Average qualified weekly benefits are up 13% and over half of E.I. clients qualified for a 20% higher benefit in 2002 versus 1992. However, the average annual benefit amount paid to regular beneficiaries has decreased by 3% from $6,550 in 1992 to $6,380 in 2002. The reduced duration for which workers collect benefits accounts for most of this change.

Employment Insurance

trends and usage in Newfoundland and Labrador

Income Security Benefits Paid to Individuals Remain High

Despite the reduction in E.I. use in recent years, total payments from UI/EI, NCARP/TAGS[1] and Social Assistance programs remain in the one billion dollar range. However, total amounts from these programs have declined since the early NCARP/TAGS period when benefits peaked at approximately $1.4 billion.

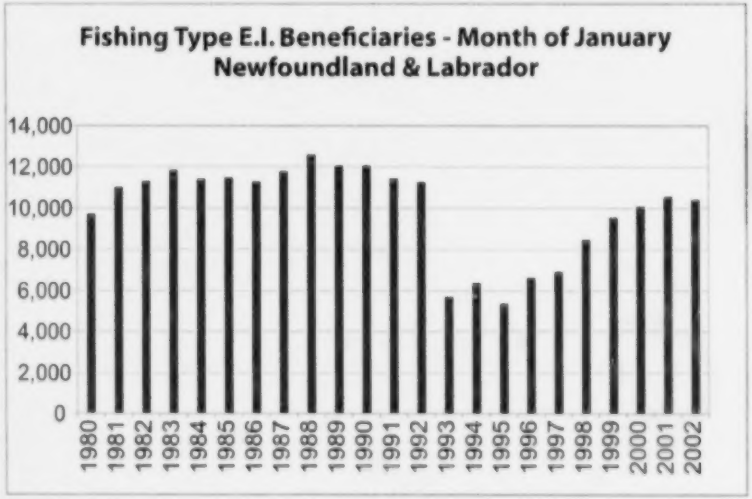
p - preliminary
Social Assistance expenditures are fiscal year amounts. Count refers to total adults.

[1] NCARP - Northern Cod Adjustment and Recovery Program was a fisheries adjustment program designed to deal with the crisis in the Atlantic Groundfish industry. It was implemented in 1992 and replaced by TAGS (The Atlantic Groundfish Strategy) from 1994 to 1998. Despite its official end in September 1998, some individuals also received income from TAGS in 1999.

Employment Insurance

trends and usage in Newfoundland and Labrador



beneficiaries

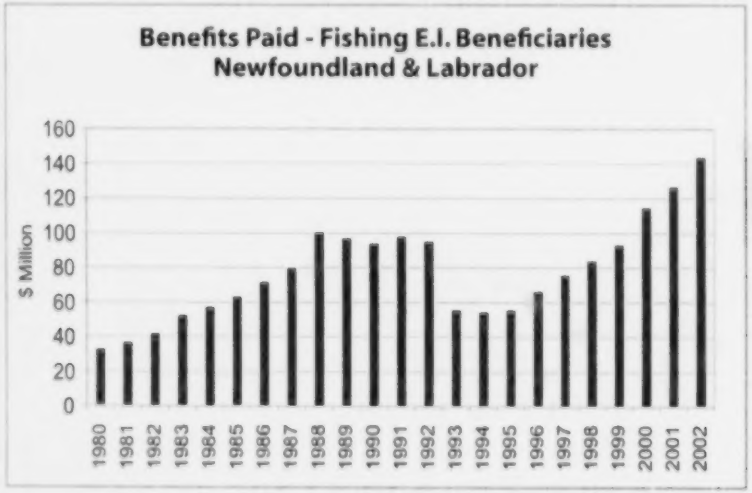
Chart 11

Statistics Canada, 73-001
& CANSIM Matrix # 005705

Fish Harvesters

Trends for self-employed fish harvesters are different than those recorded for E.I. users in the rest of the economy. The moratorium on the Northern Cod fishery caused fishing E.I. usage to decline by nearly half between 1992 and 1993. As a result of the moratorium, the NCARP program was implemented in 1992 and later replaced by TAGS in 1994. Only after individuals began to exit TAGS in 1996 to its termination in 1998, did the number of beneficiaries begin to climb.

In 1991, there were 11,960 individuals who opened a fishing type claim. By 1994 this figure had dropped to 6,430 but had climbed to 12,230 by 2002.



benefits

Chart 12

Statistics Canada, 73-001
& CANSIM Matrix # 005705

Benefits Paid at Highest Levels in 2002

The amount of benefits paid to individuals with fishing type claims was at its highest annual level ever in 2002 at $143.8 million.[5] This is $45.7 million more than was paid in 1991, prior to the moratorium; a 47% increase.

The increase in benefits can be attributed to a number of factors which affect eligible benefit

[5] *Figure includes additional benefits paid to some fish harvesters through HRDC's anti-dating provision, which allowed some individuals to be paid retroactive benefits for E.I. eligibility prior to 2002.*

Employment Insurance

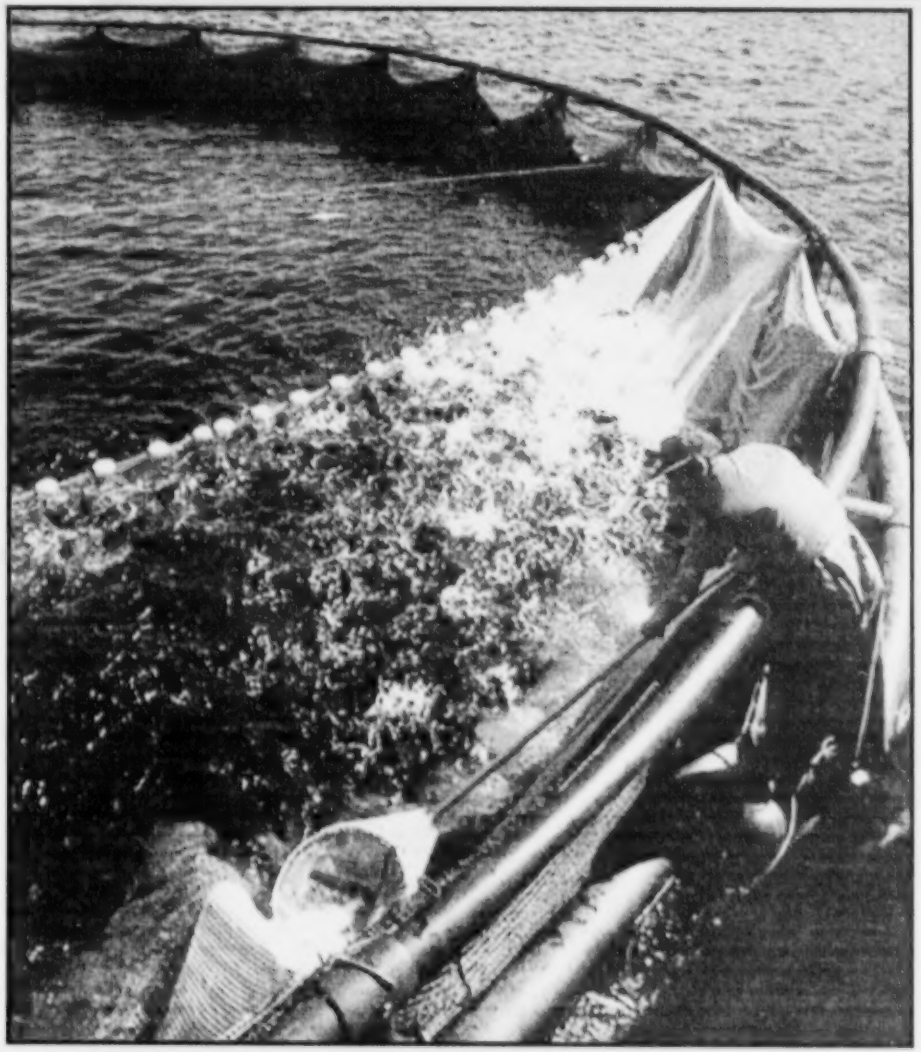
trends and usage in Newfoundland and Labrador

amounts such as higher incomes in the fishery, as a result of higher-valued shellfish species like crab, as well as increased negotiated prices paid for other species. The 1997 changes to Fishing E.I. Regulations allowing more harvestors to qualify for two claims a year if they have sufficient earnings has also been a factor.

Under the new E.I. program as it relates to fish harvesters, many more self-employed fish harvesters can qualify for two claims in the same calendar year than was the case under the old UI program.[6] In 1991, 2.4% of fish harvesters initiated a second fishing claim in the same year; in 2002, 37% initiated more than one claim. In occupations other than fishing, the average was 2.8%.

The average annual benefit paid to fish harvesters has increased from $7,630 in 1992 to $9,530 in 2002.[7] The average paid to regular type claims was $6,380 in 2002.

The number of younger individuals who collect fishing E.I. has declined, although the drop has not been as large as for other occupations. In 2002, 31% of individuals collecting fishing type E.I. were less than age 35. This is a drop of 10 percentage points from 1992 (41% to 31%); compared to regular claimants less than age 35, the decline was 16 percentage points (52% to 36%).



[6] The most significant change for fishing type claimants as a result of the 1996 E.I. reforms was that program access was now based on amount of earnings instead of weeks worked.

[7] Figure does not include benefits paid to some fish harvesters through HRDC's anti-dating provision in 2002.

Employment Insurance

data reference

This Section provides new detailed data relating to the E.I. program and its clients. Because E.I. data are derived from administrative files, special tabulations must be prepared to provide the data when they are requested. This can involve waiting times that are inconvenient to those who need the data quickly. The Reference is intended to eliminate waiting times for the majority of those who contact the Agency for E.I. data. The data in the Reference are presented in "look-up" tables that respond to most frequently asked questions. A list of other tables that can be provided upon request is provided in Appendix 2.

data reference

Occupation and Gender of Regular E.I. Beneficiaries by Qualifying Benefit
Newfoundland and Labrador, 1992 & 2002

** A small number (less than 0.3%) of individuals were excluded from table due to unreported gender.*

*** Some counts were supressed due to low counts. Figues may not add to total due to rounding and cell supression.*

DEFINITIONS:
N - Number of cases
Mean - total divided by number of cases
Median - The value below (above) which 50% of total cases fall.

data reference

Occupation and Gender of Regular E.I. Beneficiaries by Qualifying Benefit
Newfoundland and Labrador, 1992 & 2002
Rural Areas Only*

** Rural areas exclude the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.*
*** A small number (less than 0.3%) of individuals were excluded from table due to unreported gender.*
**** Some counts were supressed due to low counts. Figues may not add to total due to rounding and cell supression.*

DEFINITIONS:
N - Number of cases
Mean - total divided by number of cases
Median - The value below (above) which 50% of total cases fall.

data reference

Occupation and Gender of Regular E.I. Beneficiaries by Qualifying Benefit
Newfoundland and Labrador, 1992 & 2002
Urban Areas Only*

* *Urban areas include the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.*

** *A small number (less than 0.3%) of individuals were excluded from table due to unreported gender.*

*** *Some cells were supressed due to low counts. Figues may not add to total due to rounding and cell supression.*

DEFINITIONS:
N - Number of cases
Mean - total divided by number of cases
Median - The value below (above) which 50% of total cases fall.

SOURCE: Newfoundland & Labrador Statistics Agency: Special Tabulation

Employment Insurance Data Sources

Newfoundland and Labrador Statistics Agency - Employment Insurance Program Data

Much of the income security related data used in this report were obtained from in-house data sources developed and maintained at the Newfoundland & Labrador Statistics Agency. The source of these are listed as "special tabulation" in the report.

E.I. Data Tables Available by Special Request

- Date of birth (age)
- Gender
- Postal Code (sub-geographic location)
- Eligible weekly benefit rate
- Benefits paid
- Date of claim
- Claim type
- Insured hours/weeks
- Occupation type

The Department of Human Resources and Development Canada (HRDC) U.I./E.I. data in this report came from databases created using data received from HRDC under a special data-sharing agreement. These NLSA databases contain data as far back as 1982.

Statistics Canada - Employment Insurance Program Data

- Income beneficiaries by province, type of income benefit and sex, monthly, CANSIM II Table 276-0001
- Beneficiaries receiving regular benefits without reported earnings by province and age group, monthly, CANSIM II Table 276-0002
- Number of disqualifications and disentitlements by province and reason, monthly, CANSIM II Table 276-0003
- Claims received and allowed by province and type of claim, monthly, CANSIM II Table 276-0004
- Benefit payments by province and type of benefit, monthly, CANSIM II Table 276-0005
- Beneficiaries by province, 1996 census division and sex, monthly, CANSIM II Table 276-0006
- Earnings of employees contributing to employment insurance program by province and sex, annual, CANSIM II Table 276-0007
- Beneficiaries by province, census metropolitan areas, census agglomerations and sex, monthly, CANSIM II Table 276-0009
- Employees contributing and their contributions to employment insurance by province, age group and sex, annual, CANSIM II Table 276-0010
- Weeks paid by province and type of benefit, monthly, CANSIM II Table 276-0015
- Average weekly payments by province and type of benefit, monthly, CANSIM II Table 276-0016
